

# Test 1 JSTL, EL and Connection Pool

In this programming test, you are to create a very simple Web Application that will allow customers find books from a bookstore.

## 1. Data Source Configuration

Please create a database named as *bookstore* in Java DB, then use the *bookstore.sql* to create tables and to insert sample data records.

As shown in the above figure, you will have two tables in your bookstore database, including BOOKS and SOURCES.

**You should configure a Database Resource in your application server and access this resource in your Web Application.**

## 2. Web Application Development

Your Application should be setup as follows:

### 1) ShowBooks

The ShowBooks Servlet will function as the customer's primary interface to the Web Application. This controller will construct collections required to display book informations using the BookList.jsp View.

You must make use of JavaBeans in your servlet when constructing the collections to be passed to the BookList.jsp page.

### 2) BookList.jsp

The BookList.jsp will show a table listing books. The table should contain the following columns:

ISBN, TITLE, AUTHOR\_NAME, RETAIL\_PRICE, PUBLISHER\_NAME, **SOURCE\_NAME** and NUMBER\_ON\_HAND.

- By default, the BookList.jsp will show all the books available.
- It should also allow the user to find books by title.
- All of the books with NUMBER\_ON\_HAND less than 5 should be shown with special background color.
- All author names and publisher names shown in the BookList.jsp will link to ShowBooks servlet to retrieve books from the same author or publisher.

The BookList.jsp page should not be directly accessible via the client's browser. The 'ShowBooks' should forward the request and response as well as data collections.

**You are only allowed to use Beans, JSTL and EL to display data.**

Below is an example of the page layout of BookList.jsp

ISBN	Title	Author	Price	Publisher	Source	Quantity
0-123-1233-0	Three Musketeers, The	<a href="#">Dumas, Alexandre</a>	15.95	<a href="#">Grosset &amp; Dunlap</a>	<a href="#">Ingram</a>	10
0-124-2999-9	Celebrated Jumping Frog of Calaveras County	<a href="#">Twain, Mark</a>	18.95	<a href="#">Harper</a>	<a href="#">Ingram</a>	5
0-124-6544-X	Tiens, The	<a href="#">Dumas, Alexandre</a>	18.95	<a href="#">Harper</a>	<a href="#">Ingram</a>	4
0-124-7989-1	Dog's Tale, A	<a href="#">Twain, Mark</a>	19.95	<a href="#">Harper</a>	<a href="#">Ingram</a>	5
0-125-3344-1	Black Tulip, The	<a href="#">Dumas, Alexandre</a>	18.95	<a href="#">P. F. Collier &amp; Co</a>	<a href="#">Ingram</a>	3
0-126-3367-2	Count of Monte Cristo, The	<a href="#">Dumas, Alexandre</a>	21.95	<a href="#">Platt &amp; Munk</a>	<a href="#">Ingram</a>	12
0-127-3948-2	Corsican Brothers, The	<a href="#">Dumas, Alexandre</a>	15.95	<a href="#">Metheu</a>	<a href="#">Ingram</a>	5
0-128-3939-2	Gai-Ji	<a href="#">Clavell, James</a>	25.95	<a href="#">Delacorte</a>	<a href="#">Ingram</a>	15
0-128-3939-X	Noble House	<a href="#">Clavell, James</a>	22.95	<a href="#">Delacorte</a>	<a href="#">Ingram</a>	6
0-128-4321-1	Tai-Pa	<a href="#">Clavell, James</a>	22.95	<a href="#">Delacorte</a>	<a href="#">Ingram</a>	12
0-129-4567-1	Dragonsong	<a href="#">McCaffrey, Anne</a>	18.95	<a href="#">Atheneum</a>	<a href="#">Baker and Taylor</a>	12
0-129-4912-0	Dragonsinger	<a href="#">McCaffrey, Anne</a>	19.95	<a href="#">Atheneum</a>	<a href="#">Baker and Taylor</a>	13
0-129-9293-2	Black Unicorn	<a href="#">Lee, Tanith</a>	21.95	<a href="#">Atheneum</a>	<a href="#">Jostens</a>	6
0-129-9876-5	Shogun	<a href="#">Clavell, James</a>	24.95	<a href="#">Atheneum</a>	<a href="#">Ingram</a>	12
0-130-2939-4	White Dragon, The	<a href="#">McCaffrey, Anne</a>	21.95	<a href="#">Ballantine Books</a>	<a href="#">Baker and Taylor</a>	8
0-130-2943-2	Dragonflight	<a href="#">McCaffrey, Anne</a>	15.95	<a href="#">Ballantine Books</a>	<a href="#">Ingram</a>	12

### 3) BookBean

Please design the properties of this JavaBean by yourself.

#### Notes:

- o In order to save time, you can use ShowBooks.html given in the attached files as a template to construct your ShowBooks.jsp.
- o You may configure URL patterns for your servlets and JSPs to provide a more convenient access path.
- o You needn't handle multiple pages output.
- o You may use INNER JOIN in your SQL Statement. Here is one example for your reference:

```
select * from Books inner join Sources
on Books.SOURCE_NUMB=Sources.SOURCE_NUMB
```

- o To add a hyperlink, you can use standard HTML markup `<a href="" />`

```
<td>
    <a href="books?author=<c:out value="\${book.author}"/>">
        <c:out value="\${book.author}"/>
    </a>
</td>
```

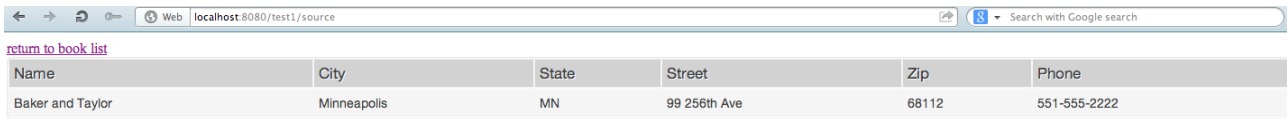

- o To avoid problems when passing parameter with special character such as '&', you can use `<c:url>` tag to encode your parameter.

```
<c:url value="books" var="publisherURL">
    <c:param name="publisher" value="\${book.publisher}" />
</c:url>

<td>
    <a href="<c:out value="\${publisherURL}"/>">
        <c:out value="\${book.publisher}"/>
    </a>
</td>
```

### Optional Task:

If you have enough time, please try to make source names shown in the [BookList.jsp](#) link to a servlet named as [ShowSource](#) which can retrieve the source information from the database; and then use [SourceInfo.jsp](#) to show the detailed information of a source.

The screenshot shows a web browser window with the address bar displaying 'localhost:8080/test1/source'. Below the address bar is a search bar with the text 'Search with Google search'. The main content area displays a table with the following data:

Name	City	State	Street	Zip	Phone
Baker and Taylor	Minneapolis	MN	99 256th Ave	68112	551-555-2222

/\*\*\*\*\* THE END \*\*\*\*\*/
